PROFILE

I'm a dedicated web developer and software engineer with nearly 10 years of experience building scalable, data-driven applications using PHP, Symfony, and Angular. I've led cross-functional teams, delivered complex projects, and streamlined development cycles through hands-on leadership. My DevOps expertise spans Docker, Git, Jenkins, and Rancher on Kubernetes, enabling efficient and secure deployments. I thrive in fast-paced environments and continually adapt to new technologies. Currently, I'm seeking remote opportunities to apply my full-stack and leadership skills to impactful, forward-thinking projects.
